## SOFTWARE

1. R package **eclust**: Dimension reduction technique for analyzing interactions between a high dimensional dataset (e.g. genomics, brain imaging), the environment and a response. [<https://cran.r-project.org/package=eclust>][1747 downloads]
2. R package **casebase**: Fit smooth-in-time parametric hazard functions using case-base sampling. This approach allows the explicit inclusion of the time variable into the model, which enables the user to fit a wide class of parametric hazard functions. [<https://cran.r-project.org/package=casebase>][917 downloads]
3. R package **manhattanly**: Create interactive Q-Q and manhattan plots that are usable from the R console, in the 'RStudio' viewer pane, in 'R Markdown' documents, and in 'Shiny' apps. [<https://cran.r-project.org/package=manhattanly>][5k downloads]
4. R package **acm4r**: Fragment lengths or molecular weights from pairs of lanes are compared, and a number of matching bands are calculated using the Align-and-Count Method [<https://cran.r-project.org/package=acm4r>][13k downloads]
